

*Control & Dynamical Systems & the Caltech Library System present*

# Making the Most of your Presentation

Effective presentation skills are a major asset for engineers, scientists, and other professionals, all the more so in the highly competitive context of the 21st century. Professional presentations hold a persuasive power not found in printed documents or electronic exchanges. Join us for this seminar that presents a five-step methodology that leads to effective presentations, and which will address your delivery, design, and visual presentation questions.

**May 23, 2003** ■ **2 – 3:30 pm** ■ **Beckman Institute Auditorium** ■ *Refreshments will be served*

Founder of JL Consulting, Dr. Jean-luc Doumont teaches and provides advice on professional speaking, writing and graphing. He also trains trainers and facilitates any process that requires structuring and effective communication. For over 15 years, he has helped audiences of all ages, backgrounds, and nationalities structure their thoughts and construct their communication, in English, French, Dutch, and Spanish, in Europe, North America, and South America. He holds an engineering degree from the Université catholique de Louvain and a PhD in applied physics from Stanford University.
