

THE D²H FEST

in honor of the 60th birthday of Darryl D Holm

July 22–28, 2007

The EPFL–Centre Interfaculaire Bernoulli
Lausanne, Switzerland
Room SG 0211

In ocean modeling, high resolution is critical for the physics, but costly.

SCIENTIFIC COMMITTEE

ROBERTO CAMASSA (USA)
MAC HYMAN (USA)
JERROLD MARSDEN (USA)
TUDOR RATIU (SWITZERLAND)
EDRISS TITI (USA)

INVITED SPEAKERS

ANTHONY BLOCH (USA)	ALEXANDER LIPTON (USA)
TOM BRIDGES (UK)	PHIL MORRISON (USA)
SHIYI CHEN (USA)	KAMRAM MOHSENI (USA)
COLIN COTTER (UK)	PETER J OLVER (USA)
PETER CONSTANTIN (USA)	ANNICK POUQUET (USA)
CHARLIE DOERING (USA)	MARIO PULVIRENTI (ITALY)
THANASIS FOKAS (UK)	VAKHTANG PUTKARADZE (USA)
BERNARD GEURTS (NETHERLANDS)	ALAN WEINSTEIN (USA)
JOHN GIBBON (UK)	BETH A WINGATE (USA)

high resolution 0.1°
sea surface temperature

Eddies transport energy and heat; LANS- α improves turbulence statistics at low resolution.

Graphics courtesy of Mark Petersen, Matthew Hecht, and Beth Wingate, LANL.

ÉCOLE POLYTECHNIQUE
FÉDÉRALE DE LAUSANNE

<http://bernoulli.epfl.ch/>

The meeting will include up-to-date research on topics such as the Camassa–Holm equation and waves, geometric mechanics, fluid dynamics, symmetry and integrable systems, regularized models and multiscale methods, ocean dynamics, and computational anatomy.
